Ca

Detection of silver with ammonium persulfate and manganese sulfate. P. G. Popov. *J. Gen. Chem. (U. S. S. R.)* 10, 1442 (1940); cf. *C. A.* 34, 7207. The sensitivity of the reaction for Ag (as proposed by Deniges) with $(\text{NH}_4)_2\text{S}_2\text{O}_8$ in the presence of MnSO_4 can be increased considerably by more accurate measurement of the amounts of $\text{H}_2\text{S}_2\text{O}_8$ and MnSO_4 . Pour into a 250-ml. measuring flask 10 ml. of a MnSO_4 soln. (4 g./l.) and add 125 ml. of 2 N $\text{H}_2\text{S}_2\text{O}_8$ soln. and bring the vol. to 250 ml. Add to one test tube 5 ml. of the sample and 5 ml. of the MnSO_4 soln. In a control test tube add 5 ml. of the same MnSO_4 soln. to 5 ml. of distilled water. Keep both test tubes in a beaker with boiling water for 2-3 min. and add 0.1 g. of $(\text{NH}_4)_2\text{S}_2\text{O}_8$. After 3-4 min., the contents of the test tube contg. Ag salts are pink-violet and those of the control test tube remain brown. The pink-violet color appears also when 0.0025 mg. of Mn is present in 10 ml. of the soln. Thus, the sensitivity of the reaction is increased 8-fold. Two references. W. R. Henn

AUTHOR: Royfe, I.M.; Popov, P.G.; Yakovlev, S.P.

TITLE: Effect of a longitudinal high frequency current on the stability of a *B*
quasisteady filamentary discharge.

SOURCE: Zhurnal tekhnicheskoy fiziki, v.35, no.2, 1965, 259-265

TOPIC TAGS: plasma stability, gas discharge, high frequency current, magnetic field

ABSTRACT: The stabilizing effect of a high-frequency current on a high-current filamentary discharge in hydrogen or argon was investigated. The discharge took place in a glass tube 25 cm long and 4 or 8 cm in diameter. The flat portion of the current pulse, 300 or 500 microsec, was considerably longer than the rise time. Currents up to 10 kA were investigated and high-frequency (3 or 20 Mc/sec) currents up to 6 kA were employed. The discharge took place in a longitudinal magnetic field that could be varied from 0 to 3 kOe. The stability of the discharge was observed by means of a Rogovskiy belt, magnetic probes and high-speed photography. In the absence of the high-frequency current the argon discharge was stable at currents below 5 kA, and the hydrogen discharge at currents below 2 kA. At higher currents

Card 1/2

L 33164-65

ACCESSION NR: AP5005226

under some conditions of pressure and magnetic field the high-frequency current was observed to have a stabilizing effect. Specifically, in the hydrogen discharge in the 4 cm tube no stabilizing effect was observed at pressures below 2×10^{-2} mm Hg. At pressures from 2×10^{-4} to 5×10^{-4} mm Hg the high-frequency current exerted a stabilizing effect provided a magnetic field of the correct magnitude was present. At higher pressures the stabilizing effect was present even in the absence of a magnetic field. It is suggested that the stabilizing action may be due to the periodic fulfillment of stability conditions in high-frequency resonance radial vibrations of the filament, but it is concluded that further experiments are required to verify this. "The authors consider it necessary to mention that the work with the 4 cm diameter tubes was performed in collaboration with Yu.G.Bobrovyy, who also constructed a portion of the apparatus related to this part of the work." Organization, Planning (Cont.)

SOV/6559

COVERAGE: The book presents a comprehensive review of problems connected with economics of the aircraft industry and with the organization and planning of aircraft production. Concrete problems of organization of work at aircraft enterprises are analyzed as they apply to various types of aircraft plants, e.g., aircraft construction plants, engine manufacturing plants, instrument-making plants. Specific features of the organization and planning of production in industrial and experimental plants are outlined. The Introduction and Ch. I, II, and XI were written by Professor N. A. Orlov; Ch. III by Docent S. V. Moiseyev, Cand. of Techn. Sciences; Ch. IV and XIX by Docent S. A. Sarkisyan, Cand. of Econ. Sciences; Ch. V and X by Docent D. E. Starik, Cand. of Techn. Sciences; Ch. TITLE:

The Development of Higher Pedagogical Education in the RSFSR
(Razvitiye vysshego pedagogicheskogo obrazovaniya v RSFSR)

PERIODICAL:

Fizika v Shkole, 1957, # 6, pp 71 - 79 (USSR)

ABSTRACT:

The article describes the conditions and poor facilities existing in the pedagogical training of teachers in pre-revolutionary Russia. The authors describe the introduction of a new system in the training of teachers for Soviet schools which began at an All-Russian Conference of school workers in August 1918, and then mention the various stages of development. During WW II the number of teachers decreased from 670,800 in 1940/41 to 429,700 in 1942/43. Towards the end of the war the network of pedagogical educational institutions was re-established, however, the general impetus in culture, education, and technical progress demanded more efficient training, which the pedagogical institutes could not provide. For many years after the war there was a shortage of students at the physico-mathematical faculties of the pedagogical institutes. The number of male students decreased sharply, and even in the departments of physics, until recently, the number of young men was only 7 - 10 per cent of the entire number.

Card 1/ 2

The Development of Higher Pedagogical Education in the RSFSR 47-6-28/37

The article further deals with the overtaxing of the school program stating that the course in physics is complicated and difficult. Textbooks, both for the general course in physics and for theoretical physics, are needed badly. The works of Professor Putilov, Professor Shpol'skiy and the Academician Tamm are unsuitable for this purpose. In 54 pedagogical institutes of the RSFSR (of a total of 110) a new subject "Physics and the Principles of Production", was taken up in the physico-mathematical faculties. It provides for 310 hours of practical training at plants and factories. About 3,426 hours or 78% of the total number of hours provided for mathematics, physics and technics, were assigned for this new speciality. The 5-year teaching plan provides for 27 instructional courses, physics being the leading one.

In order to prepare the students for their future educational duties, they work as assistant teachers at schools while visiting the institute. In conclusion the authors point out the unsatisfactory conditions prevailing at the pedagogical institutes in the outer districts of the country in regard to teachers for the physico-technical courses.

AUTHOR: Popov, P.I., Professor (Moscow) 47-4-8/20

TITLE: Astronomical Observations in September - December 1957 (Astronomicheskiye nablyudeniya v sentyabre - dekabre 1957 g.)

PERIODICAL: Fizika v shkole, 1957, No 4, pp 54-56 (USSR)

ABSTRACT: The author points out that the teaching of astronomy in the schools is also polytechnical instruction, in so far as the students become acquainted with the practical application of this science in different fields of national economy, learn to use various appliances and to make observations. He gives a general description of the firmament, the various star constellations, their names, the origin of these names, where they are located and at what time of the year they can best be seen, also what eclipses of the sun and moon will take place during the second half of 1957. The article mentions the name of the Soviet astronomer V.A. Ambartsumyan who discovered within the constellation of Perseus one of the first new groups of stars which he called "star associations". According to V.A. Ambartsumyan the association consists of "new" stars which have formed only recently.

TITLE: Preparation "M-1" (Preparat M-1)

PERIODICAL: Standartizatsiya, #1, Jan-Feb 1957, p 52 (USSR)

ABSTRACT: The "M-1" preparation is used to prevent budding in stored potatoes. It represents a mixture of alphanaphthalacetous acid methyl ether ($\text{dL-C}_{10}\text{H}_7\text{CH}_2\text{COOCH}_3$) - in quantities of 3.8-3.2% with fine-ground loam containing not more than 2% moisture. It is made in two grades which differ according to the color of the loam. The preparation is standardized by "TOCT 8140-56" which goes into effect on 1 January 1957. It is packed in 4 to 5-layer bituminous paper bags with a net weight of 35 kg or in 1-3 kg packages. Potatoes are dusted in layers of 10-12 cm by not over 3 kg of dust per ton of potatoes. The dust need not necessarily get on every potato. The stored potatoes are to be piled not over 100 cm high, which makes 8 to 10 layers to each dusting. The dust "M-1" has no toxic effects. It is destined for treatment of edible as well as industrial potatoes and is effective under various storage conditions.

Title : Hydrolysis Ethyl Alcohol.

Orig Pub : Standartizatsiya, 1957, No 2, 67-68

Abstract : The necessity is pointed out to expand the production of hydrolysis alcohol. One ton of sawdust (45-50% moisture content) or wood chips replaces in the production of alcohol 0.3 ton of grain or 1 ton of potatoes. A new State Standard 8314-57 for hydrolysis alcohol has been promulgated.

Novoplasmine: A new chemotherapeutic agent. P. I.
Kouy and M. V. Degtyarev (Kazan Veterinary Research
Inst.). Farmakol. i Toksikol. 8, No. 5, 15-20 (1945).
The etiotropic and organotropic effects of sym-bis(p-
dipropylaminoethylphenyl)urea bis(methyl methosulfate) or
novoplasmine (I), ρ -Et₂NCH₂S₂CONHCH₂NH₂·HCl or
(methyl methosulfate) or pytoplasmine (acarone, III)
were studied in dogs and horses. Given to horses sub-
cutaneously, I is effective against hemoplasmodial infections
in doses of 0.0001-0.0002 cc. (?) of 1% soln. per kg.
Arterial tension and pulse rate are increased. In concns.
of 0.1-1 p.p.m. I induces contraction in isolated frog,
cat, and rabbit hearts. At 2 p.p.m., or by longer action,
atole is decreased. Cardiac muscle tonus is raised and di-
toxic, 0.0025; toxic, 0.0001; lethal, 0.0005 cc. (?) of 1%
soln. per kg., given subcutaneously; but toxicity depends
greatly on the age, health, and nutritive state of the
animal. While I, II, and III have similar effects, I is
most active and permits the massive dosage called for
in the Ehrlich concept of chemotherapy. Cardiograms of
perfusion tests in isolated rabbit hearts with I at 0.125
and 0.25 p.p.m. show high sensitivity at these concns.

ABSTRACT: The July scientific meeting was held from 17 April to 15 May 1959 in the Moscow Polytechnic Institute--Steklov Mathematical Engineering Institute. More than 600 participants from 100 different institutes attended the 2 plenary and 18 sectional conferences. A total of 148 lectures were held. The following lectures are especially mentioned: V. G. Romanov on the thermal-nuclear characteristics of the reactor; D. S. Lushchik on the physical foundations of molecular electronics; Yu. A. Leksin on the construction of a new reactor; A. M. Sosulin, I. V. Sosulin, and N. A. Prochorov on the perturbational collision of deons and nucleons; A. B. Mikaelian on the possibility and necessity of carrying out atomic energy research in space which are exiled within the nucleus itself; and a method of comprehend them; A. A. Shabotov and N. A. Prochorov on the analysis of the possible experiments for the determination of the measurements of the parameters; I. B. Planck-Molok on the spectrum of liquid and crystalline hydrogen under pressure (5000-10000 atm); and an instrument for measurable absorption curves.

Rapaport and O. V. Chizhov on a new application "possibilities of the diffusion chamber"; V. V. Kostylev on calculating "possibilities for linear electron accelerators"; V. V. Kostylev and N. N. Basmanov, A. B. Shabotov and A. A. Shabotov on new theories of the electron capture under heating conditions; A. A. Shabotov and G. D. Brashay on optimum wave length for a converter; S. P. Lebedev and G. A. Tsvetkov on magnetostatic resonance; V. V. Zorin, Th. V. Arkin, and V. V. Kostylev on the theory of the MPI; and V. V. Kostylev, O. V. Chizhov, V. I. Kudryavtsev and V. I. Kostylev on organization of the electric current in the system of the station with consideration of the scattering field. O. A. Kostylev on a method for measuring the heat conduction of liquids and the theory of this method; V. A. Kostylev and V. I. Kudryavtsev on heat transmission in the system of aqueous salt which flows in a circular space. V. I. Kudryavtsev on heat transmission in calculating networks; V. I. Kudryavtsev on spatial condition when working with a flat trile in the impulse technique; O. G. Podgor'ev on calculation methods and construction of ac impulse transients; for interaction with semiconducting elements; Ya. A. Kostylev and V. A. Kostylev on the characteristics of the interaction of particles with matter; B. I. Kostylev on the development of universal electrical conductors; S. N. Kostylev on calculating "possibilities" of other parameters of technical processes; A. I. Kostylev on the analysis of several systems with which physicochemical processes can be automatically controlled; A. I. Kostylev on a method to evaluate the quality of a reactor control; when the reactor produces a stepwise or linearly; G. A. Leonov, and V. I. Kostylev on examination of the iodine method of refining niobium and characteristics of the metal obtained; P. L. Grusheva and J. G. Ryabova on examination of the microdistribution of lithium radiation; iron and other elements in strontium and cesium by use of autoradiography; G. B. Pedrov on determination of the nuclear heat of iron; G. B. Pedrov and A. A. Demchenko on determination of the distribution of radioactive iodine atoms and G. B. Pedrov and A. A. Demchenko on determination of the coefficients of chronium, nickel, iron and titanium in nickel steels. The literature first published in the lectures will be published by the MPI in a separate volume.

TITLE: Sugsessjon [Foto kontura na sverdene]
PREDJOSHNIK: 1959, № 7, pp 17-21 (USSR)

PERIODICAL: Geodesiya i kartografiya, 1959, № 7

ABSTRACT: In May 1959, the ordinary competition for the best topographic and aerogeodetic production was concluded at the Glavnaya uprav- lya i kartografiya. The competition was conducted by the Main Administration of Geodesy and Cartography of the Ministry of Internal Affairs of the USSR [Glavgeodez i kartografiya MIA SSSR]. The competition included 7 aerogeodetic services [kartograficheskii otdel i aerogeodetskii otdel], 7 aerogeodetic organizations [kartograficheskii otdel i aerogeodetskii otdel], 7 cartographic bureaus [kartograficheskii otdel], and 10 cartographic studios [kartograficheskii otdel]. A total of 30 topographic and aerogeodetic organizations participated. The 1st prize and 2nd place were awarded to V. N. Mironov and V. F. Uspakov respectively.

collapsars were awarded to : 1) I. V. Serebrennikov, 2) 500 rubles each for "Establishment of Fixed Points by the Method of Traversing by Means of Vapors"; 2) I. V. Serebrennikov, 3) I. V. Serebrennikov for "Construction of an Overhead Road Trolley for Disaster Transports"; 3) I. V. Kytin for "Variation in the Intensity of Photoelectric Cells on the SP-202"; 4) V. P. TITLE: Monitoring the correct operation of automatic control systems

SOURCE: Ref. zh. Avtomat. telemekh. i vychisl. tekhn., Abs. 10A513
14

REF SOURCE: Sb. Nekotoryye vopr. nadezhnosti elementov i sistem avtomatiki. M.,
1964, 47-52

TOPIC TAGS: automatic control system, error measurement, automatic control design,
test monitoring

ABSTRACT: The authors consider several methods for monitoring the correct operation
of automatic systems. For automatic control systems operating on the principle of
eliminating the error signal, an unbalanced relay is described, connected to the in-
put of the actuating element. The relay operates whenever the error signal exceeds
a certain value in either direction. A block diagram of an automatic system using
this method of monitoring the correct operation is described, based on the use of a
limited working signal from a pickup when the regulated parameters do not deviate
from the specified value. Variants of the block diagram are proposed such as to en-
sure stabilization of the limitation level and of the gain of the amplifier in order
to maintain the static and the dynamic accuracy of the system. [Translation of abstract]

TITLE: Production testing of 08Yu cold rolled low carbon steel

SOURCE: Metallurg, no. 3, 1966, 27-28

TOPIC TAGS: low carbon steel, deoxidation, cold rolling, quality control / 08Yu steel

ABSTRACT: Production testing was carried out on nonaging 08Yu steel sheets at the Cherepovetsky Metallurgical Plant and the results were compared to the norms set by GOST 9045-59. Melting was carried out in single-grooved Martens furnaces of average capacity; deoxidation by ferromanganese was done in steps--50% in the furnace and 50% in the ladle; Al was also introduced in the ladle in quantities of 100-150 g/T of steel while full deoxidation was accomplished by the addition of Al pellets in quantities of 900-1000 g/T. The chemical composition of 08Yu steel compared favorably with the standards set by GOST 9045-59 (experimentally--C=0.04-0.08%, Si=0.01%, Mn=0.32-0.38%, S=0.009-0.016%, P=0.01-0.015%, Cr=0.01-0.03%, Ni=0.03-0.07%, Cu=0.02-0.07% and Al=0.02-0.05%). Ingots weighing 14T were hot rolled in 15-18 passes into slabs of

135x140 mm thickness and 1070-1430 mm width on a 1150 bloom. These slabs were next cold rolled to a maximum of 60% reduction into sheets of 2.5-3.5 mm thickness and 1040-1430 mm width. Annealing was done at 550°C for 10 hrs at a heating rate of 15°/hr and cooling was at 6°/hr. The final operation was a finishing pass at 1.0-1.3% reduction. Tests made on the sheets after aging at 200°C for 30 min substantiated that the steel was nonaging. The sheets performed well in stamping tests which were run under the stamping conditions used at the Gor'ky Automotive Plant. Orig. art. has: 1 table.

TITLE: The three-operation problem and its application to mass servicing

SOURCE: Moscow. Inzhenerno-fizicheskiy institut. Upravleniye yadernymi energeticheskimi ustanovkami (Control of nuclear power plants), no. 1. Moscow Atomizdat, 1966, 130-133

TOPIC TAGS: operations research, servicing technique, minimization, PRODUCTION ENGINEERING

ABSTRACT: The authors deal with a technological process consisting in the finishing of n articles at three different operating places. At a given instant of time, one and only one article can be processed at a given working place. Each article is assumed to pass through the three working places in a strictly defined sequence. The times that the given article is worked on in the three different places is different. The question is to determine the sequence of processing n articles in such a way as to perform the complete operation with minimum time. Expression for the total time are given for various relations between the operation times and the problem is reduced to a minimax equation in matrix form. An inequality for satisfaction of the minimax condition is derived, after which the optimal sequence can be determined by

TITLE: A discrete contactless phase-sensitive pickup.²⁵ Class 74, No. 174962
(announced by Kuznetsk Scientific Research Coal Institute (Kuznetskiy nauchno-
issledovatel'skiy ugol'nyy institut))

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 18, 1965, 130-131

TOPIC TAGS: phase meter, magnetic circuit, magnet

ABSTRACT: This Author Certificate presents a discrete contactless phase-sensitive pickup consisting of a fixed toothed magnetic circuit with control windings and a moving magnetic circuit without windings. In order to simplify the pickup and to obtain an unambiguous signal pickup, two readout windings are situated on two external teeth of the fixed magnetic circuit (see Fig. 1). The moving magnetic circuit, which is connected to the moving object, is equipped with one readout tooth.

TITLE: Some methods of increasing the reliability of electron tube amplifiers

SOURCE: Moscow. Inzhenerno-fizicheskiy institut. Avtomatika i telemekhanika, no. 3, 1962. Sistemy upravleniya yadernymi energeticheskimi ustanovkami, 26-34

TEXT: The authors analyze the following methods: 1) Parallel connection of the main and the standby amplifier, the latter being connected via a summing device utilizing negative feedback. 2) Standby amplifier switching by means of an anode load impedance, applicable to power amplifiers or oscillators with tungsten filaments. 3) A special circuit excluding the variation of gain and load current in the case of failure of heater circuit. Gain variations (with respect to normal gain) and design criteria are discussed. There are 6 figures.
